HOW TO SPECIFY AND ORDER YOUR ADDITIONAL UNITS

Please browse through this brochure to identify the items that you would like to order. The ordering checklist provided on the back page details all the information that is needed to order your required products to complete your kitchen.

Please note that the product range included in this brochure does not reflect our entire product offer.

To view the full offer please visit www.symphony-group.co.uk, or call our team on 01226 446610.

Our Additional Units team is on hand to ensure you can order your additions easily. Simply follow the steps below.

IDENTIFYING YOUR KITCHEN UNITS

When planning your additional units please ensure you have the correct measurements. The following pages will assist you in identifying the information you require when ordering your additional kitchen units. Please use the fold out page at the back of the brochure as a checklist.

REQUEST A QUOTE

You can find your plot number and PD reference order number via the sticker on the inside of the cupboard under your sink. When you are ready to request a quote or to discuss your order with us please contact us on **01226 446610** or email **additional.units@symphony-group.co.uk**.

IMPORTANT INFORMATION

Please ensure that you inform us of the following information about your property:

PLOT NUMBER:
SITE CODE:
(5 digit code available from your Builder, e.g. SY600)
HOUSEBUILDER NAME:
SITE NAME:
SITE ADDRESS:
SITE POSTCODE:

PLACE AN ORDER

All orders are processed by phone so when you are ready to place an order please contact us on **01226 446610**. We accept payment for your additional units order by either credit/debit card or cheque.

DELIVERY

Our standard delivery time is 3 weeks. Please note that you will need to arrange the fitting of your additional units as we offer these on a supply only basis and do not offer a fitting service.

Your additional units will be delivered to an address of your choice. You will need to arrange for an authorised person to be present at the time of delivery to sign for the order and provide access to your property. Our team will offload and take your additional units into the property. The majority of units are supplied in an assembled format, although certain units have to be supplied ready for assembly due to their size and/or construction. Please also note that to ensure the safe transit of assembled units some items may be supplied loose such as legs and handles.

*Please check your delivery for defects/missing items before making an appointment with your fitter.

NOTE

All cabinets should be fitted by a competent/qualified fitter, all electrical work should be undertaken by a qualified electrician and all plumbing work should be undertaken by a qualified plumber.

STEP 1 IDENTIFY YOUR CABINET

Koncept 18mm Excel and 15mm Vista are the most popular cabinet specifications in new homes. Please note this does not represent our entire product offer, to view the full portfolio please visit www.symphony-group.co.uk or call our team on 01226 446610.

KONCEPT CABINET SPECIFICATION

15MM VISTA CABINETS

Internal cabinet colour always white with a variety of external cabinet colours.

KONCEPT CABINET SPECIFICATION

18MM EXCEL CABINET

Fully colour co-ordinated interior and exterior cabinet colours.

IDENTIFY YOUR CABINET

Gallery 18mm cabinets include co-ordinated interior and exterior colours with integrated soft close hinges and drawer runners as standard.

GALLERY CABINET SPECIFICATION

18MM STANDARD AND PREMIUM CABINETS

Fully co-ordinated interior and exterior cabinet colours. (Premium cabinets shown).

Gallery standard includes 3mm hardboard backs on wall units, with wall unit depths being 285mm. Gallery Premium includes 8mm solid backs on wall units, with wall unit depths being 330mm. Both Standard and Premium cabinets have Silver drawer boxes.

STEP 2

IDENTIFY YOUR DRAWER

SUPRA DRAWER BOX

Colour: Grey

Cabinets: 15mm Vista and 18mm Excel

Soft Close: Optional upgrade

ATIRA DRAWER BOX

Colour: Silver

Cabinets: 18mm Excel and Gallery

Soft Close: As standard

STEP 3

IDENTIFY YOUR HINGE

KONCEPT (VISTA AND EXCEL) CABINETS

110° STANDARD 110° SOFTPLUS

170° versions of the above hinges are also available

GALLERY CABINETS

SENSYS 110° SOFTCLOSE

STEP 4

IDENTIFY YOUR CABINET COLOUR

White

Grey Linen

Blonde Oak

Riviera Oak

REPLACEMENT CABINET END PANELS

To enhance the finish of a selection of our kitchens, replacement cabinet end panels are available to order at an additional cost.

The replacement end panels are available on 18mm cabinets only and are pre-fitted to the exposed ends of a unit run only. On base and tall units (for example larder units and tall appliance housings) the replacement cabinet end panel is a full length panel extending to the floor and therefore additional blender panels will not be required.

Please note: Belfast sink cabinets, bridging units for American fridge freezers, 1366mm and 1560mm high dresser boiler housings, Mid-Height Units, and reduced depth base cabinets are not available with replacement ends.

STEP 5

IDENTIFY YOUR HANDLE

INLINE RANGES

If your kitchen has one of the 4 Inline trims detailed below, then you have an Inline kitchen range.

Aluminium Inline Trim

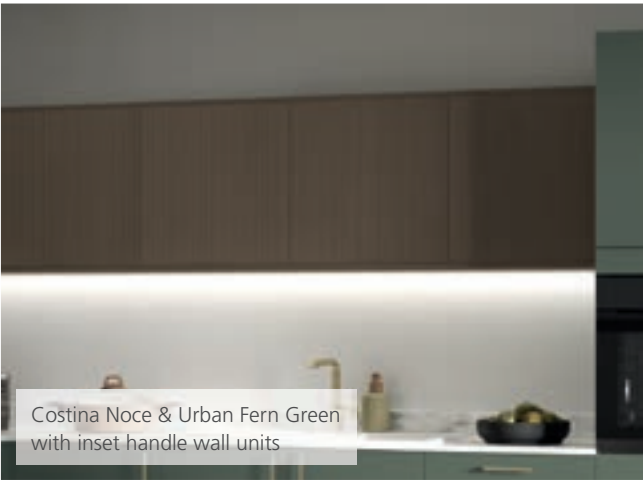

Black Inline Trim

Brass Inline Trim

Gunmetal Inline Trim

Costina Noce & Urban Fern Green with inset handle wall units

INSET HANDLE WALL UNITS

Inset Handle Range Availability		
Alta	Costina	Hacienda
Inline Form	Inline Icon	Inline Select
Inline Studio	Inline Trend	Medford
Melrose	Plaza	Princeton
Turin	Urban	Virginia
Woodbury		

The inset handle can be added to all wall units and bridging cupboards and is to be designed with standard handles on base units to create a subtle, more streamlined design option for the modern kitchen.

STEP 6 IDENTIFY YOUR KITCHEN RANGE

For **Koncept** brand kitchen ranges, please visit the **online range selector** via the **QR code** here:

Gallery®

If you have a **Gallery** brand kitchen please use the **QR code** here to identify your range.

STEP 7 IDENTIFY YOUR UNITS

Have a look through the cabinets available and select the ones that suit your requirements whether is it base, wall or larder cabinets needed to fit in the space available in your kitchen.

UNIT CODES

PREFIX LETTERS

These indicate the type of unit, such as BU for base unit; WU for wall unit; LU for larder unit; OH for oven housing unit.

NUMBERS

The numbers indicate the width of the unit followed either by the depth, or in case of wall units, the height. For example a WU1056 is a wall unit 1000mm wide and 561mm high. A BU56 is a base unit 500mm wide and 600mm deep.

SUFFIX LETTERS

Any letters following the number code indicate a variant of the type as follows:

A-K - variations of corner units or appliance housing formats
 F - Full height door base unit
 D - Drawer line base unit
 DD - Single base unit or corner base unit with a dummy drawer
 DAI - Double base unit with two dummy drawers
 DAC - Double base unit with one dummy drawer
 BO - Corner base unit with no corner post

BS - Corner base unit with dummy drawer and no corner post
 FP - Corner base unit with flexible corner post
 GL - Unit with left hand replacement end
 GR - Unit with right hand replacement end
 G2 - Unit with two replacement ends
 IN - Inset Handle

STEP 8 SPECIFY YOUR UNIT HANDING IF REQUIRED

HANDINGS

Many units are described as left or right handed. Handings should be expressed as if looking at the unit from the front.

Handings required are:

- The side of the hinge on single units (e.g. left hand hinged)
- The side of the blanked end of corner units (e.g. left hand blanked)
- The position of the drainer on sink units (e.g. left hand drainer)
- The end position of a base wing end unit (e.g. left hand end)
- The side of a dummy drawer on a double base unit (e.g. left hand side)

STEP 9 REMEMBER TO ORDER PLINTHS AND ACCESSORIES

Specify any plinths and accessories such as cornice, pelmet, lighting, splashbacks and internal storage as required.

- 1 Lighting
- 2 Plinth

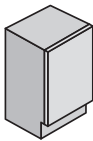

- 3 Cornice
- 4 Pelmet

- 5 Upstand
- 6 Splashback

ISLAND END PANEL	BREAKFAST BAR PANEL	BREAKFAST BAR PANEL	PLINTH (INC SEAL)
920x1184x18mm	920x1800x18mm	920x2400x18mm	2600x146mm (minimum size)
BBBP1292CF	BBBP1892F	BBBP2492F	CONPLINTHF

Note:
Alta and Inline Select ranges have 350mm deep filler, wall and shelving panels. Island end panels are 1190 rather than 1184 in 22mm thick ranges (Cranbrook, Langdale, New York). Grain direction is horizontal on 2400 breakfast bar panels.

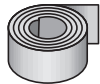

INFILL CODES

General infill panel codes have been set up to make it easier to specify the correct infills across all kitchen ranges. These specify either a frontal or blender to be used as an infill depending on the range (e.g, New York is supplied with a frontal with the integrated handle).

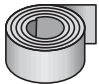

BASE FILLER PANEL*	561mm HIGH WALL UNIT FILLER*	724mm HIGH WALL UNIT FILLER*	900mm HIGH WALL UNIT FILLER*	TALL INFILL PANEL 2600 x 142mm
BFF372	WFF356	WFF372	WFF390	TINFILLF

* Dimensions vary by range, but will either be supplied with a 300mm frontal or 352mm wide blender panel.

CABINET ELEVATIONS

2100mm Cabinet Elevations - Contemporary style example

NB: Base cabinet height to underside of worktop is 870mm. Actual base cabinet depth is 470mm or 570mm (500mm or 600mm with worktop). Actual wall cabinet depth is 285mm on Standard and 330mm on Premium specifications.

2276mm Cabinet Elevations - Classic style example

NB: Base cabinet height to underside of worktop is 870mm. Actual base cabinet depth is 570mm (600mm with worktop). Actual wall cabinet depth is 285mm on Standard and 330mm on Premium specifications.

Shaker Door Designs

Please note that the shaker ranges Cranbrook, Harvard, Langdale and Princeton include shaker designs for all door sizes, apart from there are variations to this for the narrowest 150mm doors. This is due to the size of the door and shaker profile. Details for these are as follows:

Cranbrook
150mm Doors
Shaker Profile

Harvard
150mm Doors
Shaker Profile

Langdale
150mm Doors
Shaker Profile

Princeton
150mm Doors
Flat Profile

GUIDANCE NOTES

For the installation of kitchen fitments

DELIVERY AND STORAGE ON SITE

ALWAYS:

- Store units, worktops and other items under cover, in dry conditions, immediately.
- Store loose shelves separate from units.
- Protect unit fronts.
- Cover units during storage to prevent dirt and debris collecting on moving parts such as drawer runners and hinges.
- Avoid twisting and distortion.
- Store worktops upright or flat, face to face on bearers with the top surface protected against damage.

NEVER:

- Store units on their sides unless they have soft, grit-free material underneath.
- Stack base units more than three high.
- Stack wall units more than four high.
- Stack frontals against each other or against a wall.
- Store units, worktops and other items near direct heat.
- Remove tapes from doors or drawers until they are ready to be fitted.

Customers must check units as they are delivered and sign for them as being in good condition. If they are not, the driver's copy of the advice note must be marked accordingly and signed by the customer.

INSTALLATION METHODS

Consideration should be given to following trades when allowing access to electrical points, rodding eyes, stop taps, waste traps and any other items or areas where post completion access will be required.

To prevent any accidental damage to the doors and drawers always remove them from the units and store carefully away from the working area. Any sleeving protection should remain on until they are refitted to the units and adjustment has been carried out.

Having checked the plot for level and square, commence by marking a level line on the wall around the base unit area to indicate the finished unit height.

FITTING KITCHEN UNITS

Should it be necessary to scribe the rear of the units, then this must be as little as possible especially if integrated appliances are to be fitted into tall units or under worktops.

Kitchen base units should be fixed to the wall using the metal cabinet fixing bracket supplied. The appropriate fixing should be dependent upon the surface being fixed to.

Tall units (oven housings, larders, etc.) should be level and plumb on all faces and fixed to the wall at four points.

Wall units are to be fixed level and square using hanging brackets if appropriate, or directly to the wall through the back rail where the following number of fixings should be used: Up to 600mm wide unit 4 fixings 800mm to 1000mm wide unit 5 to 6 fixings.

Fixings for standard walls should be 2½" No. 10 counter sunk screws or longer. Dryline walls (dot and dab) will require longer hollow wall fixings, depending on the thickness of the dab and the type of block work being screwed into. It is essential to use the correct fixings and to check screws match the correct plug size being used.

Units should be screwed together at three positions, preferably hidden from view (e.g. by hinge block, back rail on base units and behind shelf on wall units). All visible screw heads should be capped with colour caps.

Extended voids (over 600mm wide between end panels) under worktops, especially corner units, and adjacent to worktop joints, should have supporting battens fixed to the wall beneath.

Do not fit wall units directly onto stud walls. In this scenario, noggins are required to provide extra support.

APPLIANCE SPACES

Care should be taken when leaving spaces for freestanding and integrated built-under appliances.

Built-under integrated spaces should be 603mm maximum. This will allow for easy installation and removal without causing problems with door alignment.

600mm integrated and cantilever cooker hoods require 600mm at the back and front of the void.

Freestanding appliances should have a minimum space 10mm greater than their width to allow easy installation/removal.

Adjacent units to appliance spaces must be plumb and parallel.

Hose positions for dishwasher and washing machines are critical especially on integrated appliances. Dishwasher hoses should be led through an aperture, cut at low level into the side panel at the rear of the adjacent sink unit, for connection to services within that unit. Washer hoses should have holes drilled at top level in the side panel at the rear of the sink unit if connecting to service in the unit.

When fitting any appliances the manufacturer's installation instructions must always be read prior to any installation and followed throughout.

When fitting 'wet' appliances ensure that hoses do not become kinked or trapped when the appliance is pushed home.

FILLERS

Filler panels are to be scribed to walls and sealed with matching decorator's filler and not silicone.

15mm or smaller fillers where seen, should be edged in exterior cabinet matching colour.

Tray spaces or any site constructed platforms should have the front edges to match the cabinet colour exterior.

PLINTH

Continuous plinth will be cut and edged at the unit run ends to finish flush with the cabinet end panel. Cabinet exterior matching edging tape should be applied to the raw coreboard with contact adhesive. Peel and stick edging or hot melt adhesive is not recommended.

Vent grills should be used for ventilation in plinths where required for integrated appliances. The cut plinth should be sealed with silicone prior to installing grills.

Plinths should never be glued or nailed to cabinets as this prevents easy removal.

GUIDANCE NOTES

For the installation of kitchen fitments

CORNICE AND PELMET

Cornice and light pelmet mitres should be clean and accurately cut by mitre saw using a fine tooth blade.

Fixing cornice should be from above. If this is not possible, fixing from the inside of the cabinet is recommended. When fixing from the inside of the cabinet, 10mm recessed screw caps should be used and 1" x No. 6 CS screw. If longer screws are used and not recessed they should be covered by a matching cover cap.

Light pelmet can be fixed direct through the wall unit bottom or with half blocks/L brackets. A mixture of both methods of fixing is acceptable especially when fixing to display feature units.

All mitres should be glued using PVA wood glue or Cyanoacrylate adhesive. Under no circumstances must hot melt adhesive be used.

Only minor discrepancies in the cut should be filled with matching filler waxes, (not silicone).

Direct fixing should be positioned as close to the end panels as possible for both pelmet and cornice. The number of fixings per unit size are as follows:

300mm to 600mm wide unit	2 fixings
800mm to 1000mm wide unit	3 fixings

The third fixing for 800/1200 units to be by the centre post.

Cornice should be inset on all wall unit/tall unit returns so that the front lip of the flat (fixing) base of the cornice is inset by 15mm, but fitted with the front edge of the unit's top panel on the elevation.

Pelmet should be inset by 15mm on wall unit returns but flush with the front edge of the bottom shelf on the elevation. In this way the appearance of a uniform recess will be achieved when the unit door is closed

WORKTOP FIXING

Worktops should be fixed to the base units and independent tops to wall battens, and levelled in both directions.

The tops are fixed through the brackets or half blocks on the base unit end panels, and up through the front rail.

The fixings in the front rail should be as close to the end panel as possible and by the centre post on a double base or corner unit.

Mason Mitre and butt joints should be flush fitted. And three jointing bolts need to be used on all kitchen worktops unless they are reduced in depth or width. Matching topseal should be used to seal the worktop ends prior to jointing.

If the back of the worktop has been scribed to the wall it should then be re sealed with

silicone* before installation. Take special care if sealing behind a sink.

Hob and sink cut outs should also be sealed with silicone* and the chipboard should be cut and the dust then cleared away. Then silicone* should be applied to ensure all holes are filled.

*It is recommended that Silicone to BS EN ISO 11600 be used in all cases.

AFTERCARE INSTRUCTIONS

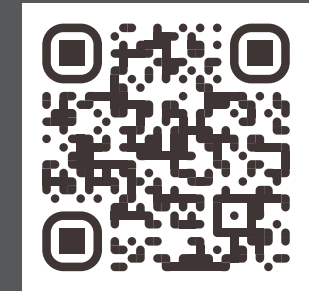

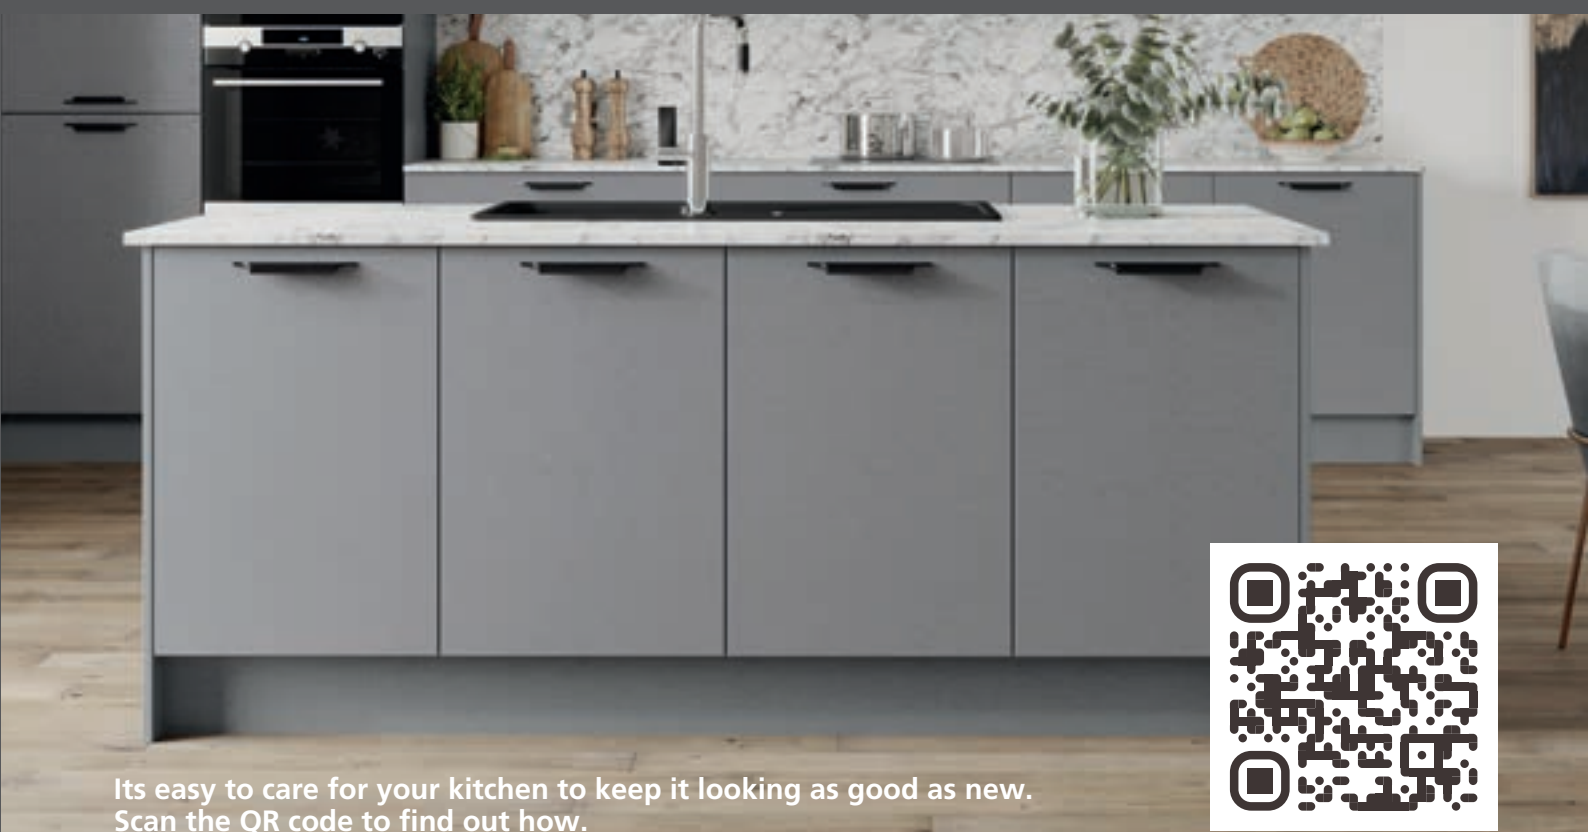

- The tape from all doors and drawers should be removed by hand, without the use of a sharp implement.
- Any marks subsequently left should be cleaned off using warm water and a mild detergent.
- DO NOT attempt to clean units, worktops or sink tops with cleaning powder or any form of abrasive material or agent.
- Drawer runners and hinges should be cleaned to ensure that no plaster, grit or other material will impede their action.

BUILDING DIVISION INSTALLATION

MY SYMPHONY

Caring for your Kitchen

YOUR SYMPHONY KITCHEN CABINET

Symphony kitchens are manufactured from high density, fine surface particle board, which complies with the British Standard BS EN 312-P2. You can be assured that all cabinets are tested to and pass FIRA Gold product certification. Cabinets are supplied on adjustable legs to cater for uneven floors and to protect against moisture ingress. Vulnerable cabinet edges are lipped to resist moisture in to the panels.

GENERAL CABINET CLEANING ADVICE

Sensible general cleaning practice includes avoiding use of an abrasive cleaner or strong chemicals (such as vinegar, nail varnish remover, solvents and bleach) on surfaces and always wiping off any water with a soft cloth rather than leaving it to stand. It should be noted that cabinets are not resistant to water and will swell if wet, so any spillage should be dried immediately. To clean your cabinets simply use a slightly damp non-abrasive cloth with a little liquid soap.

All Symphony frontals and doors have been made to withstand the normal wear and tear associated with kitchen life and are treated to resist normal household cleaning chemicals. However, any spills should be rinsed immediately and dried thoroughly. Avoid placing electric kettles and steamers directly below wall units and on worktop joints to minimise condensation. Naturally, you should also regularly check that all handle screws are secure and never rest heavy objects on partly opened doors or drawers.

ADJUSTABLE SHELVES

Unit shelves are adjustable to suit your needs. Whilst units have been FIRA Gold approved and tested to withstand strong weights, we recommend that you load the heaviest items on the base of the cabinet with lighter items on the shelves. It is recommended to evenly distribute items within a cabinet to avoid minor distortion of the unit. Adjustable metal hanging brackets secure wall units to the wall, though we recommend that heavy items are not placed in wall units for both accessibility and safety reasons.

In addition to the specific guidelines detailed in this brochure, you should naturally take extra care when working near to hot surfaces or using cleaning agents. For example, keep all chemicals, detergents, hot pans and sharp objects out of children's reach and never allow them to be unattended in the kitchen and to swing on doors or drawers.

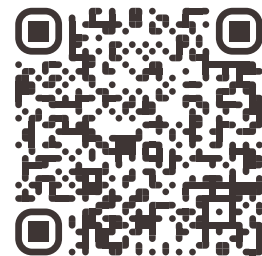

From your kitchen to your bedroom,
Symphony can help you fulfill your
new home dreams.

by Symphony®

Urbano by Symphony is our exclusive bedroom
range that offers a wide variety of hinged, front
framed, and Glide sliding doors. Our stylish
bedroom furniture finishes complement your
Symphony kitchen and will help your house look
and feel like your home.

Creating the perfect living space

In keeping with our policy of continuous product development, we reserve the right to change colours, designs, materials, descriptions or methods of manufacture. Such changes may be made without notice and without incurring any liability. Nothing in this publication should be considered to be part of any contract. The illustrations included in this publication are to indicate general format and are not necessarily correctly scaled, proportioned or detailed.

Natural wood is used in some of our kitchens. As a natural material, wood reflects the endless variety of grains and textures found in nature and such variances can be expected in any selection of timber fronted units. Timbers mellow when exposed to sunlight, so a colour change can be expected.

PVC laminates and cabinet finishes are also subject to slight colour change over a period of years. Unless specified otherwise, the expression 'solid timber' refers to door and drawer fronts only. A copy of our conditions of sale is available on request. Errors and omissions excepted.
